ECONOMIC CONSULTING LLC

Donner Summit Public Utility District

2021 Utility Rates Study

DRAFT

March 12, 2021

HEC No. 200336

The following report was prepared by Hansford Economic Consulting LLC.

The analyses and findings contained within this report are based on primary data provided by the Donner Summit Public Utility District, as well as additional secondary sources of data available as of the date of this report. Updates to information used in this report could change or invalidate the findings contained herein. While it is believed that the primary and secondary sources of information are accurate, this is not guaranteed.

Every reasonable effort has been made in order that the data contained in this study reflect the most accurate and timely information possible. No responsibility is assumed for inaccuracies in reporting by the client, its consultants and representatives, or any other data source used in the preparation of this study. No warranty or representation is made that any of the projected values or results contained in this study will actually be achieved. There will usually be differences between forecasted or projected results and actual results due to changes in events and circumstances.

Changes in economic and social conditions due to events including, but not limited to, major recessions, droughts, major environmental problems or disasters that would negatively affect operations, expenses and revenues may affect the result of the findings in this study. In addition, other factors not considered in the study may influence actual revenues achieved. Any applications for financing, or bond sales analyses, should re-evaluate the financial health and projection of revenues and expenses at the time of the application or preparation for bond sale.

Section 1: INTRODUCTION AND SUMMARY OF FINDINGS

1.1 PURPOSE OF THE STUDY

The Donner Summit Public Utility District (District or DSPUD) provides water, wastewater, and recycled water utility services to residents and businesses along the I-80 corridor, the communities of Soda Springs and Sugar Bowl, and several ski resorts. The District’s service territory comprises approximately 13 square miles, with customers located within both Nevada and Placer counties. The District also provides wastewater treatment services to the Sierra Lakes County Water District (SLCWD) by way of agreement, and treated water services to the community of Big Bend.

The purpose of this Utilities Rate Study (Study) is to determine the level of funding required over the next five years to adequately fund the District so that it can safely operate both utility systems meeting State and Federal regulatory requirements, and to determine a schedule of property-related fees to support that level of funding.

This report provides an explanation and justification of the calculated water and wastewater utility rates for the next five years and it documents adherence to the law regarding setting of rates by a special district. Per California Constitution Article 13D, these types of utility rates shall not be extended, imposed, or increased by any agency unless it meets all of the following requirements:

- (1) Revenues derived from the fee or charge shall not exceed the funds required to provide the property related service.
- (2) Revenues derived from the fee or charge shall not be used for any purpose other than that for which the fee or charge was imposed.
- (3) The amount of a fee or charge imposed upon any parcel or person as an incident of property ownership shall not exceed the proportional cost of the service attributable to the parcel.
- (4) No fee or charge may be imposed for a service unless that service is actually used by, or immediately available to, the owner of the property in question. Fees or charges based on potential or future use of a service are not permitted.
- (5) No fee or charge may be imposed for general governmental services including, but not limited to, police, fire, ambulance or library, services, where the service is available to the public at large in substantially the same manner as it is to property owners.

The utility financial models presented in this report project revenues and expenses and calculate rates for the next five fiscal years with the first change in utility rates implemented with the first quarter billing statement (July through September 2021).

1.2 BACKGROUND

The District last conducted a water utility rate study in 2016, a Big Bend only water fees study in 2018, and a wastewater utility rate study in 2018. Water and wastewater rate updates are necessary at this time to a) ensure revenue sufficiency of the utility systems for the next five years, and b) demonstrate the District's ability to repay existing and planned future debts. No changes are proposed to the Big Bend water fees schedule adopted in 2018.

Rate studies are typically conducted every three to five years to ensure revenue sufficiency. As part of the regular periodic review of the rates, best practices include maintaining financially self-sustaining utilities, setting policies or guidelines on appropriate reserve levels, including depreciation in the rates, and continual customer outreach to educate on the value of the services provided.

This report presents the results of the analysis and calculated rates for the next five fiscal years (2022 through 2026).

1.3 RATE SETTING PRINCIPLES AND REPORT ORGANIZATION

This report was prepared using the principles established by the American Water Works Association (AWWA), the Water Environment Federation (WEF), and Government Finance Officers Association (GFOA).

The AWWA "Principles of Water Rates, Fees, and Charges: Manual of Water Supply Practices M1 (the "M1 Manual") establishes commonly accepted professional standards for water cost-of-service studies. This manual is referenced in the water rate study.

The wastewater rate study uses standard industry practices outlined in the WEF Manual of Practice No. 27 and guidelines prepared by the California State Water Resources Control Board for State Revolving Fund financing.

The GFOA publishes guidelines on sufficient cash balances for enterprise funds. Minimum cash balance targets for each utility fund in this Study are based on the GFOA guidelines.

The Study is presented in five sections. Following this introduction and summary of findings, Section 2 describes the historical and financial health of the District; its sources of revenues and major expense categories. Section 3 provides the water fees methodology and calculations. Section 4 provides the wastewater fees methodology and calculations. Section 5 provides a summary of the impact of the calculated five-year projection of rates on the District's financial health and provides a bill impact analysis for customers of the District.

Appendix A includes support tables for the water and wastewater rate calculations. **Appendix B** includes supporting calculations for a scenario under which two neighborhoods in Sugar Bowl convert from septic to municipal wastewater service.

1.4 WATER FEES FINDINGS

The updated water rate schedule is provided in **Table 1** below. There is no proposed change to the District’s water rate structure but rates are increased to keep pace with inflation, keep up with needed system rehabilitation costs, and to increase cash in the water fund to a prudent level as recommended by GFOA.

Table 1
Calculated Five-Year Water Fee Schedule

sum water

1.5 WASTEWATER FEES FINDINGS

As with water, there is no proposed change to the wastewater rate structure; rates are increased to account for the following key factors: (1) decrease in costs paid for by SLCWD per interlocal agreement, which divides expenses between the two districts based on the percentage of flow each one contributes into the plant, (2) less than anticipated growth in number of customers that was built into the 2018 wastewater rate study, and (3) need to increase annual revenue receipts to satisfy State loan debt service coverage requirements.

The updated wastewater rate schedule is provided in **Table 2** on the next page. Scenario (A) presents the increased rates assuming there are no new customers added to the wastewater system (or that buy a share of capacity into the wastewater treatment plant). Scenario (B) presents the increased rates assuming homes in two neighborhoods in Sugar Bowl (West Village and East Village) become wastewater customers of the District and convert from septic to municipal wastewater service. Under this scenario, improvements to serve the new customers will be borne by those customers, most likely via a land-secured special financing district.

It is recommended that the DSPUD Board of Directors (Board) adopt rates under Scenario A as these are maximum authorized rates; in the event that the Sugar Bowl septic conversion project is completed and the additional customers connect, wastewater rates can be revisited, and if prudent, frozen or lowered.

1.6 COMBINED UTILITIES IMPACTS

District. The impact of adopting the proposed water and wastewater Scenario (A) rates would be to improve the financial health of the District. **Figure 1** below shows the actual change in the District’s total cash balance between fiscal year 2016 and fiscal year 2020. During this period, cash was drawn down from approximately \$4.2 million to approximately \$1.7 million. At the end of fiscal year 2020, the District’s cash fell below the minimum advisable cash balance, per GFOA guidelines. In addition, the wastewater debt service coverage fell below the State’s requirement.

The proposed increased water and wastewater rates would bring the District back into full compliance with State loan requirements within the first fiscal year, and would gradually increase cash reserves back to recommended levels.

Figure 1
Historical and Projected Cash Balance

As a best management practice, service utilities need sufficient cash balance to:

- Serve cash flow needs
- Pay for emergency and unplanned necessary repairs
- Accumulate for system rehabilitation (planned improvements)
- Provide rate stabilization

While each utility needs to assess its risks on an individual basis using knowledge of the current status of infrastructure, regulatory requirements, cash flow “bumps” and so forth, there are some general guidelines to measure what a prudent reserve would be for the utility. The GFOA best

practice is to start with a baseline of 90 days of operating expenses and adjust depending on local circumstance. GFOA guidelines to adjust the target for local circumstances include:

- Frequency of revenue collection - DSPUD has predictable, steady revenues – this lowers the cash flow concern.
- Diversity of the customer base – timely payments and cash flow is less of a concern with a diverse customer base. DSPUD has a mostly residential database and a few large corporate customers (Boreal, Soda Springs, Donner Ski Ranch and Sugar Bowl ski resorts).
- Unpredictable weather events – large weather events can cause need for costly emergency work. Donner Summit does experience snow and flood events, which should be considered.
- Ever-increasing California environmental standards / requirements for wastewater and water treatment – may require new infrastructure and/or monitoring expenses. The District has been subject to large increased costs due to environmental concerns in the past.
- Rate stabilization – raising rates is unappealing; especially with a small customer base such as DSPUD’s. When there are sufficient reserves, more gradual rate increases can be introduced.

Given the above GFOA guidelines, it is recommended that the District have an overall target (water and wastewater combined) unrestricted cash balance of six months (180 days) of projected operating expenses, with a minimum of four months (120 days) of projected operating expenses.

Customers. District residents receive quarterly utility bills that include charges for water and wastewater services; therefore, it is important to look at the combined impact of increases on customer bills. **Table 3** shows the total quarterly bill impact to a typical home in Soda Springs and Sugar Bowl using less than 10,000 gallons per month under Scenario (A). *All of the tables for the remainder of this report are prepared under Scenario (A).*

Table 3
Combined Utility Bill Impact for a Soda Springs and Sugar Bowl Home

Projected Quarterly Bill for a Typical Home

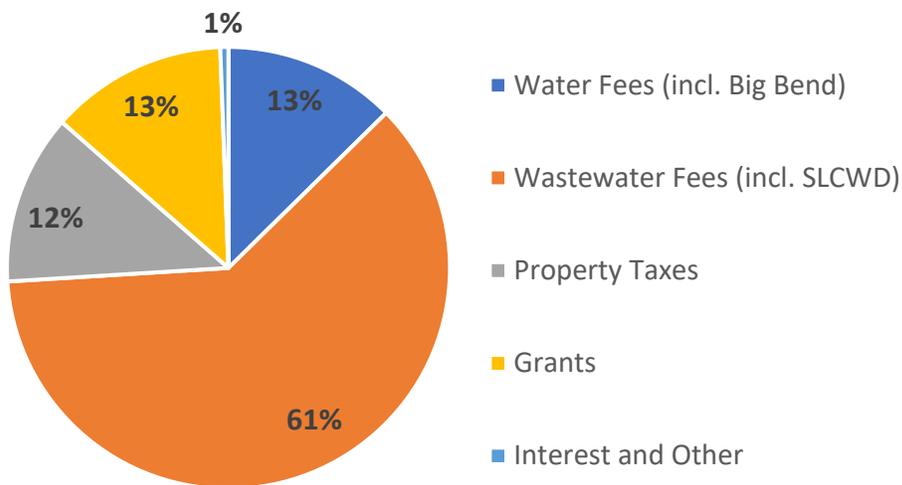

Section 2: DISTRICT REVENUES AND EXPENSES

2.1 DISTRICT REVENUES

The District's sources of revenue for the past five years are illustrated in **Figure 3**. The majority of revenue has been from wastewater fees (including fees from SLCWD for treatment of their wastewater). In recent years the District has been very successful in securing grants to complete projects for water projects, and the remaining revenues have come from water fees (including those from the Big Bend service area), property taxes, interest and other (such as late payments).

Figure 3
Sources of Revenue

More than 65% of total revenues are generated by quarterly water and wastewater fees paid by DSPUD customers. Collection of these fees is based on the authorized rate schedules adopted by the Board.

The current water rate schedules are shown in **Tables 4** and **5** on the following page. Soda Springs and Sugar Bowl service areas pay the schedule shown in **Table 4**, and Big Bend customers pay the schedule shown in **Table 5**. Note, Big Bend customers only receive water service from the District.

Table 4
Current Water Rates (Soda Springs and Sugar Bowl areas)

bigb

[1] Operations quarterly fees increase 3% per year every January 1, with the last authorized increase Jan 1, 2023.

Current wastewater rates are shown in **Table 6** on the next page. Existing customers include those customers that have paid for capacity in the wastewater treatment plant and are connected to the wastewater system. Future customers include those customers that have paid for capacity in the wastewater treatment plant but are not yet connected to the wastewater system.

In 2015, the District formed Community Facilities District (CFD) No. 1, with three areas that had the opportunity to approve or disapprove a new special tax to pay for the wastewater treatment plant upgrade and expansion. Two of the areas voted for the new tax. One area did not approve the new special tax. As a result, wastewater rates are different for customers inside and outside CFD No. 1. Customers outside CFD No. 1 pay for debt service associated with the treatment plant upgrade and expansion in their rates, whereas customers inside CFD No. 1 pay for the majority of their share of

debt service as a special tax, and a small portion of their share of debt service in their rates. In total, all existing customers pay the same (with the exception of CalTrans), and all future customers pay the same. CalTrans paid for their share of the treatment plant upgrade and expansion in one lump sum and are not obligated to make any additional payments for the project.

ww

[1] Ordinance 2-2020.

2.2 DISTRICT EXPENSES

DSPUD operating expenses include costs for personnel (salaries, wages, and benefits), power, gas and other utilities, chemicals, lab supplies, routine maintenance of infrastructure, office supplies, fleet costs, and other miscellaneous costs as illustrated in **Figure 4** on the next page. The largest cost category is for personnel, which costs make up about half of all operating costs.

The District has been successful in keeping its annual operating costs in check, with an average annual increase of 3.6% of the past five years. One cost category that is not included in the annual average increase is wastewater treatment plant costs; since maintenance costs are susceptible to unpredictable conditions, this cost category was excluded. Some cost categories have had greater than typical increases in the last five years, in particular insurance costs and benefits (which also affects Board expenses). **Table 7** on the next page shows average annual percentage increases by cost category and it compares the increases with two consumer prices indexes. The District's average annual cost increase of 3.6% is close to the average annual cost index of the San Francisco consumer price index (3.1%) and the Engineering News Record Construction Cost Index for San Francisco (3.0%).

Figure 4
District Operating Expenses

financials

[1] HEC moved from water to wastewater.

In addition to accounting for the District’s operating expenses, utility rates should collect for future costs to rehabilitate existing assets. **Table 9** below shows the depreciation for water and wastewater assets included in the District’s annual audited financial records. The increase in depreciation for water assets in 2019 reflects the improvements that were completed at Lake Angela. The rate study includes 25% of annual depreciation in the rates. This rate revenue may be used for capital improvement projects as they arise; and, until they do, they will remain as District cash on hand (reserves).

**Table 9
Depreciation of District Assets**

Fiscal Year	Water	Wastewater
2016	\$65,136	\$690,153
2017	\$64,641	\$703,534
2018	\$87,566	\$703,557
2019	\$114,516	\$689,361
2020	\$114,189	\$692,737
System Rehab. @ 25%	\$29,000	\$173,000

Source: Audited financials. depr

The District’s annual operating expenses are allocated between the water and wastewater systems as shown in **Appendix A Table A-1**. Almost 80% of operating costs are incurred by the wastewater system.

Section 3: WATER FEE CALCULATIONS

3.1 DSPUD WATER SYSTEMS

The District owns two water systems. The Lake Angela surface water system provides potable water to the communities of Soda Springs and Sugar Bowl (about 355 water connections). The Big Bend groundwater system provides potable water to the community of Big Bend (29 cabins).

3.2 WATER REVENUE REQUIREMENT

According to the AWWA M1 Manual, the first step in the ratemaking analysis is to determine the adequate and appropriate funding of a utility. This is referred to as the “revenue requirement” analysis. This analysis considers the short-term and long-term service objectives of the utility over a given planning horizon, including capital facilities and system operations and maintenance, to determine the adequacy of a utility’s existing rates to recover its costs. Specifically, the revenue requirement refers to the amount of money that must be raised for revenue sufficiency of the water fund through rates. The projection of the revenue requirement is the cornerstone for the calculation of rates. This section explains the derivation of revenue requirement for the water system. Components of the revenue requirement include:

- Operating Expenses
- Debt Service
- System Rehabilitation
- Reserves for Capital or Operating Costs

Table 10 on the next page shows the projected revenue requirement for the water system for fiscal years 2022 through 2026. Operating expenses are increased from the fiscal year 2021 budget using the historical annual percentage increases for each of the cost categories explained in the previous section, except however that if a cost category had a negative change, an annual increase of 4% was used to project the costs for that category. Water system debt service include a loan from the State Water Resources Control Board (SWRCB) for the improvements made at Lake Angela in 2018, a loan from PG&E for electrical system upgrades, and the USDA loan for construction of the treatment facility to serve Big Bend. Big Bend loan repayment estimates are provided in **Appendix A Table A-2**. The PG&E loan repayments schedule, most of which is payable by the wastewater system, is provided in **Appendix A Table A-3**.

Other costs included in the revenue requirement include system rehabilitation (25% of the water system depreciation) and operating reserves. According to the District’s auditor, the water fund had a negative cash balance of nearly \$575,000 as of June 30, 2020. The water rates need to support a healthy cash reserve for the water department; therefore, additional sums are included in the revenue requirement to build back the water fund’s cash reserves.

Credited against the described costs are non-operating credits; namely, Big Bend service fees and rates for debt service, property tax allocated to the water fund, and some smaller miscellaneous revenues.

Table 10

revw

[1] Personnel costs adjusted in fiscal year 2022 to account for retirements.

[2] Water system allocated 20% of Fire Station lease revenue and other revenues.

Components of the projected water revenue requirement are illustrated in **Figure 5** on the next page.

Figure 5
Components of Water Revenue Requirement

3.3 WATER RATE CALCULATIONS

Calculated water rates for a typical home are presented in **Table 11** on the next page. Over the five-year period, rates need to increase 61%. For a typical home that uses less than 10,000 gallons per month, the monthly rate would increase from \$72.98 this fiscal year to \$86.25 July 1, 2021.

Water rates are charged according to the size of the water meter serving the customer. Fees for all meter sizes are shown in **Table 12**. If the customer uses more than the base monthly allowance, the District will charge overage fees. Overage fees are charged per thousand gallons used above the base allowance each month. Collection of overage fees is rare as most customers use less than their base monthly allowance.

A revenue check for the water system financial model using current water rates is provided in **Appendix A Table A-4**. The revenue check demonstrates that the financial model is within 7% accuracy of current conditions and is therefore reasonable for the five-year projection.

Table 11
Calculated Water Rates for a Typical Home

Item	2021 Budget	Fiscal Year Ending

sum water

3.4 PROJECTED WATER CASH FLOW

A projected cash flow for water operations under the proposed increased water rates schedule is presented in **Table 13**. The proposed water rates should generate a cash surplus each year that would be put towards the negative cash balance, gradually bringing the cash balance back into a positive position by the end of the five-year period.

Table 13
Projected Cash Flow for Water

w flow

Section 4: WASTEWATER FEE CALCULATIONS

The wastewater rate study was prepared using the principles established by the WEF Manual of Practice No. 27 and guidelines prepared by the California State Water Resources Control Board for State Revolving Fund financing.

4.1 THE WASTEWATER SYSTEM AND CUSTOMERS

The wastewater system services the I-80 corridor and communities of Soda Springs and Sugar Bowl. In addition, the District's wastewater treatment plant accepts wastewater effluent from the SLCWD. The District's collection system transports wastewater to the treatment plant. After being treated to the required effluent water quality standards, the treated wastewater is piped to the Soda Springs Ski Area where it is applied to the land during the summer months and partially used for snowmaking during the winter months, with the balance of the treated effluent disposed to the Yuba River during the winter months. Treated effluent is also available for dust control and other non-potable uses year-round under permit with the State.

Wastewater customers are measured in Equivalent Dwelling Units (EDUs). Most residences have one EDU; lodges and homes with guest houses have more than one EDU, as do businesses along Donner Pass Road, the ski resorts, and the CalTrans rest areas at the summit along I-80. **Appendix A Table A-5** shows the current and projected number of wastewater EDUs estimated in this study.

Scenario (B). **Appendix B Tables B-1 and B-2** show the projected number of wastewater EDUs under Scenario B.

4.2 WASTEWATER REVENUE REQUIREMENT

As previously described for the water fees calculations, the revenue requirement describes the amount of money that must be raised through collection of quarterly fees (or "Rates"). Components of the wastewater revenue requirement include:

- Operating Expenses
- Debt Service
- System Rehabilitation
- Reserves for Capital or Operating Costs

The projected revenue requirement through fiscal year 2026 for wastewater is presented in **Table 14** on the next page. Operating expenses are increased from the fiscal year 2021 budget using the historical annual percentage increases for each of the District's cost categories, except however that if a cost category had a negative change, an annual increase of 4% was used to project the costs for that category.

Wastewater department debt service includes a loan from SLCWD that will be fully repaid this fiscal year, a loan from the SWRCB for the wastewater treatment plant upgrade and expansion project (see the debt service schedule **Appendix A Table A-6**), and PG&E loan repayments for electrical upgrades, details of which are provided in **Appendix A Table A-3**.

revww

[1] Personnel costs adjusted in fiscal year 2022 to account for retirements.

[2] Budget for 2021 includes a one-time non-recurring cost that is removed in fiscal year 2022.

[3] Final payment due January 1, 2048.

[4] Final payment due December 31, 2041.

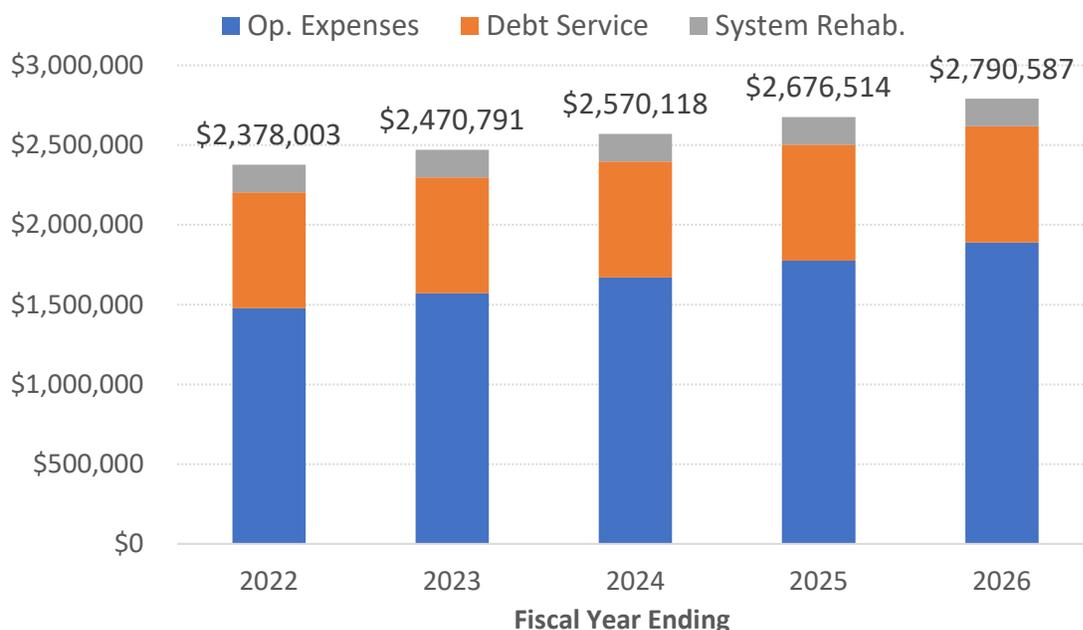

[5] SLCWD annual payment is calculated based on their share of flow entering the plant. It is projected as 25% of wastewater operating expenses, excluding Board expenses, plus administrative fees.

[6] Credit is for a period of seven years.

Other costs included in the revenue requirement include system rehabilitation (25% of the wastewater system depreciation) and collections to meet debt service coverage requirements.

Credited against the described costs are non-operating credits; namely, recycled water sales, SLCWD contributions, propane credit (sunsets in seven years), property tax allocated to the wastewater fund, and some smaller miscellaneous revenues. Components of the projected revenue requirement are shown in **Figure 6** below.

Figure 6
Components of Wastewater Revenue Requirement

Scenario (B). Under Scenario (B), the District would incur debt to finance infrastructure improvements that would extend municipal wastewater service to two neighborhoods (West Village and East Village) in Sugar Bowl that currently use septic systems. The District would pay the debt service but the revenue for the project costs would be generated solely by those properties receiving benefit from the new infrastructure. The District would most likely use a land-secured financing instrument such as a CFD to collect the annual revenues necessary to service the new debt. Estimated debt service for the project is shown in **Table B-3** in **Appendix B**. The estimated revenue requirement under Scenario (B) is presented in **Table B-4**.

4.3 WASTEWATER RATE CALCULATIONS

Revenue requirement that is paid for by all customers excludes the SWRCB loan debt service, and is shown at the bottom of **Table 14**. The revenue requirement is paid for by existing and future customers. Future customers pay for a portion of the annual operating costs of the District’s wastewater system. Currently, future customers pay 49% of an existing customer’s rates. The updated calculation presented in this report increases the percentage share due by future customers to 50% using the same metrics as the 2018 wastewater rate study. The calculated monthly rates per EDU payable by all customers is presented in **Table 15** on the next page.

Table 15
Calculated Monthly Rates per EDU (All Customers)

Cost	Fiscal Year Ending

sum ww

4.4 PROJECTED WASTEWATER CASH FLOW

The projected wastewater cash flow under the proposed increased wastewater rates schedule is presented in **Table 20** below. The wastewater fund had a positive cash balance on June 30, 2020 but it is projected to have negative income fiscal year 2021, resulting in drawdown of just over \$500,000 this fiscal year. A large portion of projected cash balance at the end of this fiscal year is restricted per the requirements of the SWRCB loan.

This fiscal year it is projected that the District will not meet the required 1.10 debt service coverage requirement of the SWRCB loan¹; however, with the proposed rates in place, the debt service coverage will again be met in fiscal year 2022. By the end of the five-year period, unrestricted cash will again be within the target range for the wastewater fund.

ww flow

[1] Debt service coverage ratio must be at least 1.10 per the SWRCB Clean Water SRF agreement.

The wastewater fund cash flow includes cash withdrawals for capital improvement projects that are detailed in **Table 21** on the next page. The District provided estimated costs in 2021 dollars that have been inflated to estimated costs in the years the improvements are anticipated to occur.

¹ If the District wants to issue future debt on parity with the SRF debt, it needs to demonstrate coverage of 1.20 net revenues.

cip

Capital improvement projects include pipeline rehabilitation along Bunny Hill road and treatment plant rehabilitation including membrane replacement, coating of reactor 1, and upkeep of the wasting systems for reactors 1 and 2. The total estimated cost for the improvements is \$396,000 in inflated dollars.

Figure 7 on the next page shows the District's projected sources of wastewater revenues over the next five years.

Scenario (B). The cash flow under Scenario (B) is shown in **Appendix B Table B-9**.

Figure 7
Wastewater Revenue Sources

Section 5: DISTRICT AND CUSTOMER IMPACTS

5.1 DISTRICT FINANCIAL IMPACTS

This section of the report describes impacts of the proposed new rates on the District and its customers.

The impact of adopting the proposed water and wastewater Scenario (A) rates will be to improve the financial health of the District. **Table 22** below shows the estimated change in the District’s total cash balance between fiscal year 2021 and fiscal year 2026². The proposed increased water and wastewater rates would bring the District back into full compliance with State loan requirements within the first fiscal year, and would gradually increase cash reserves back to recommended levels, per GFOA guidelines. The targeted unrestricted cash balance for the District is six months of operating expenses, and the minimum unrestricted cash balance for the District is four months of operating expenses. It is projected that the District can reach the minimum cash balance by the end of year two, and the target cash balance by the end of year five.

Figure 9
Projected Quarterly Bill for a Typical Home

Affordability. The State of California bases its evaluation of affordability of water utility bills on two criteria:

1. The median household income (MHI) of the community compared to the State MHI, and
2. The percentage of MHI spent on water and wastewater bills.

If a community’s MHI is less than 80 percent of the State’s MHI, and service provision is to a full-time community (more than half of the homes are lived in permanently), the community is considered “Disadvantaged”, in which case a water bill greater than 1.5% of MHI, and a wastewater bill greater than 2.0% is considered burdensome. Using the most recent U.S. Census data available, the State would not classify DSPUD as serving a “Disadvantaged” community because MHI is 81% of the State’s MHI, and SWRCB staff has indicated they consider Donner Summit to be a part-time residential community.

When a community is not considered “Disadvantaged”, water utility bills can be up to 6.5% of MHI (2.5% for water and 4.0% for wastewater) before the State will consider the rates unaffordable.

Currently, a typical residential customer’s water bill is about 1.4% of the community’s MHI. Under the proposed rates starting July 1, 2021, a typical customer’s water bill would be 1.7% of MHI. Currently, a typical wastewater bill is about 3.6% of MHI. Under the proposed new rates starting July 1, 2021, the wastewater bill would increase to 4.0% of MHI. Together, the utility bill would be 5.7% of MHI in July, which is within the range of what the State considers to be affordable. The affordability calculations are shown in **Table 24** on the next page.

Table 24
Utility Rates Affordability

revww

[1] Personnel costs adjusted in fiscal year 2022 to account for retirements.

[2] Budget for 2021 includes a one-time non-recurring cost that is removed in fiscal year 2022.

[3] Final payment due January 1, 2048.

[4] Final payment due December 31, 2041.

[5] SLCWD annual payment is calculated based on their share of flow entering the plant. It is projected as 25% of wastewater operating expenses, excluding Board expenses, plus administrative fees.

[6] Credit is for a period of seven years.
